Buparnox

Injectable Solution

Buparnox is a ready-to-use formulation based on buparvaquone, a second-generation hydroxynaphthoquinone indicated for the preventive and curative treatment of tropical or Mediterranean theileriosis, East Coast fever, and Corridor disease in cattle. Buparnox inhibits the mitochondrial respiratory chain of the parasite, causing the death of the protozoan during its intraerythrocytic and lymphocytic stages.

Bovine theileriosis is a hemoprotezoal disease caused by species of the genus *Theileria* and transmitted by ticks. It affects the lymphatic and hematopoietic systems, producing clinical signs such as fever, anemia, and deterioration of the general condition.

This results in:

► Reduced feed conversion efficiency and weight gain

► Decreased milk production

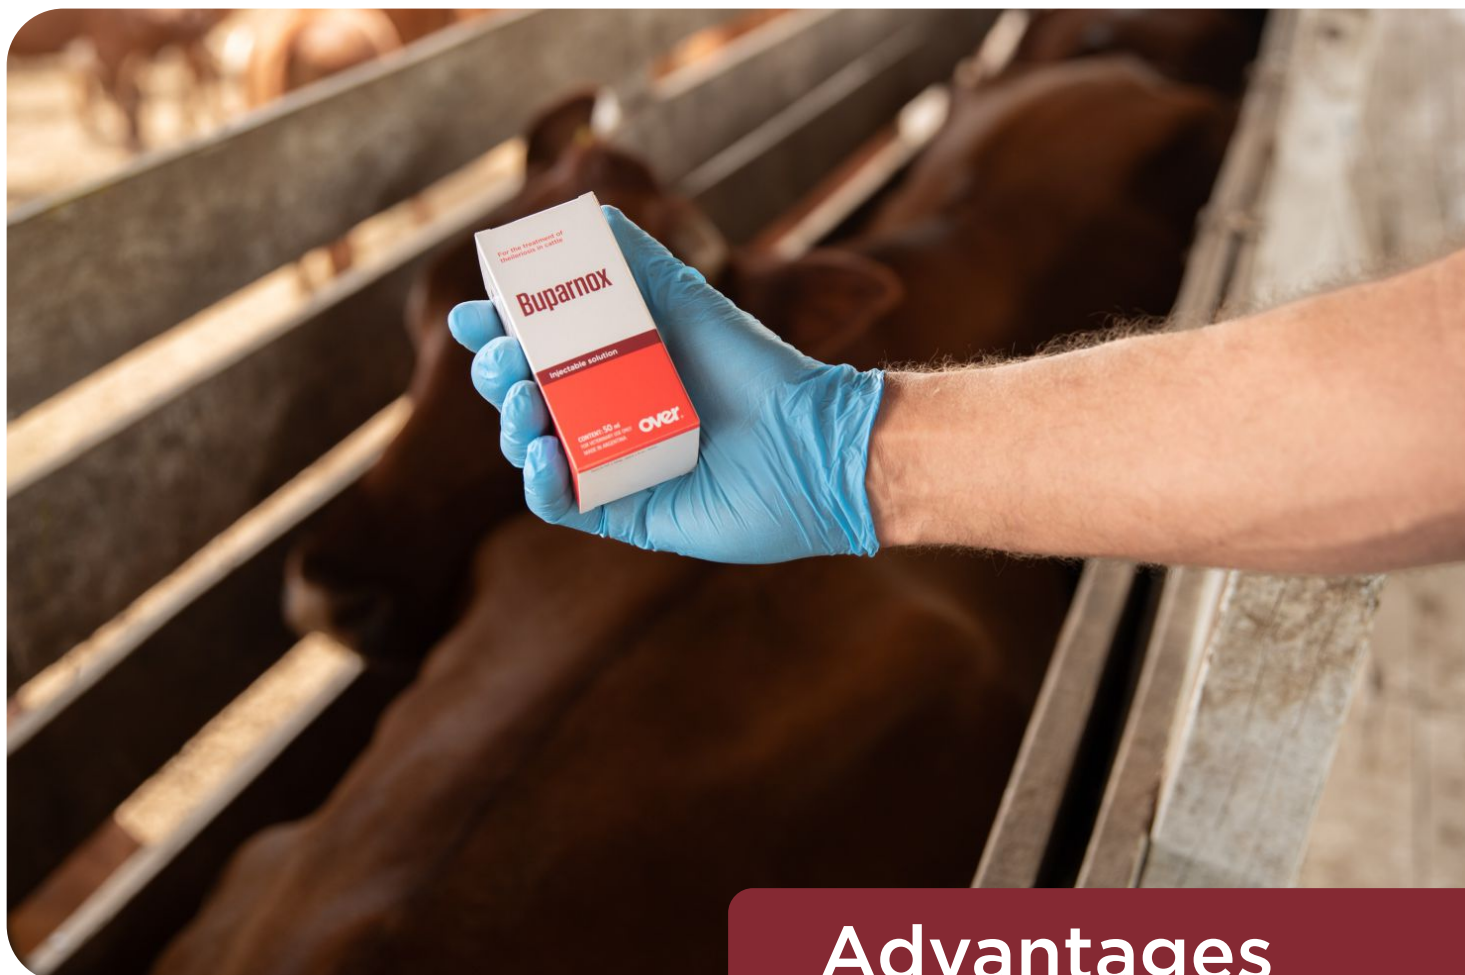

► Increased health care costs

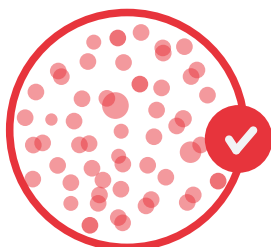

► Losses due to mortality

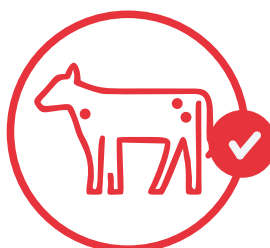

Advantages

HIGH EFFICACY
IN THE CONTROL OF
BOVINE THEILERIOSIS

EASY
INTRAMUSCULAR
ADMINISTRATION

EXCELLENT
SYRINGEABILITY

RAPID BIOAVAILABILITY
AND HIGH CURE RATE

MULTIDOSE
PRESENTATION

Buparnox

High efficacy
in the control of
bovine theileriosis

Formula:

Each 100 mL contains:
Buparvaquone 5 g
Formulation agents..... q.s.

Target species:

Cattle.

Indications for use:

Preventive and curative treatment of all forms of theileriosis in cattle (tropical or Mediterranean theileriosis, East Coast fever, and Corridor disease) caused by *Theileria parva*, *Theileria annulata*, and *Theileria sergenti*.

Administration:

Intramuscular route.

Dosage:

1 mL/20 k.l.w, equivalent to

2.5 mg/k.l.w.

In severe cases,
administer a
second dose after
48-72 hours.

Do not administer
more than 10 mL
per injection site
and do not
administer
intravenously.

Withdrawal period:

Meat: 42 days

Milk: 2 days

Shelf life after first opening:

42 days at the recommended storage
temperature.

Presentation:

Flask with 50ml of net content.
